OPERATING INSTRUCTIONS

(continued from other side)

In addition to exact speed markings for the four standard phonograph speeds, this Strobe has adjacent markings showing a plus and minus 2% and a plus and minus 4% speed deviation. These indications are for use in checking turntables and record changers that have no speed adjustment.

Properly functioning quality equipment will operate within a plus or minus 2% range of "standard" speed.

Excessive deviation, particularly if in excess of 4% indicates need for lubrication, replacement of pulleys, etc.
